

UNIVERSIDAD
DE GRANADA

Grupo de investigación FQM-115:

Física de Fluidos y Biocoloides

22 Doctores y 6 PIF

<http://biocol.ugr.es>

Investigación multidisciplinar tanto básica como aplicada en *Ciencia de Coloides e Interfases* con estrecha y dilatada colaboración con la industria

COLOIDE: Dispersión de una sustancia de 10^{-6} - 10^{-9} m (1 µm - 1 nm) (fase dispersa) en un medio (fase continua). Gran aplicación industrial y biomédica.

Fase continua	Fase dispersa	GAS	LÍQUIDO	SÓLIDO
GAS		No es posible	Aerosol líquido (niebla, sprays)	Aerosol sólido (Humo, polvo)
LÍQUIDO		Espuma (cerveza, nata montada, <i>mousse</i>) 	Emulsión (Leche, mayonesa, cremas, salsas) 	Sol (Vino, pinturas, tinta) 
SÓLIDO		Espuma sólida (pan, merengue) 	Gel (Gelatina, queso) 	Sol sólido (porcelana) 

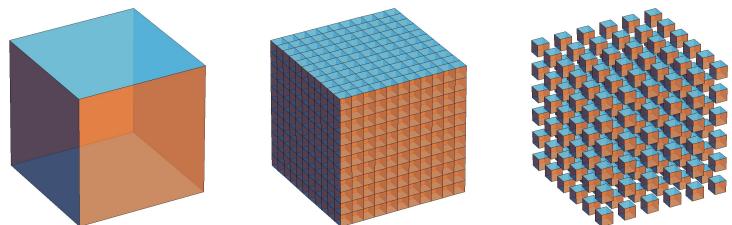

Investigación multidisciplinar tanto básica como aplicada en *Ciencia de Coloides e Interfases* con estrecha y dilatada colaboración con la industria

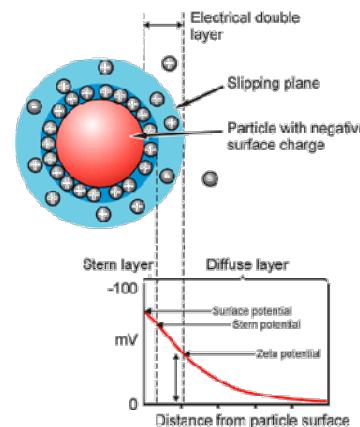

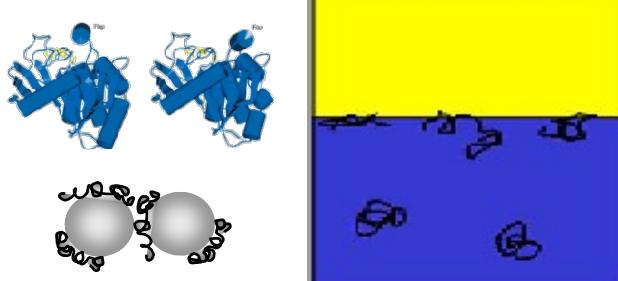

Interfases

Área superficial: característica fundamental en pequeñas partículas.

Gran relación área/volumen: importancia en interacción con otros sistemas.

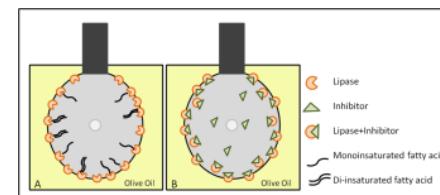

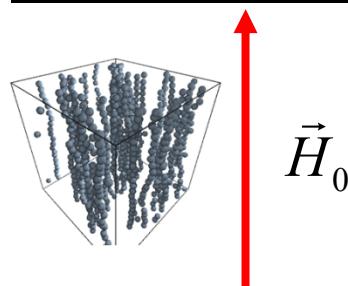

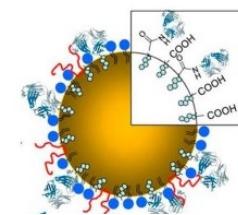

Length of side of cube	Total surface area in sample
1.0 cm	6 cm ²
1.0 μm	6 m ²
1.0 nm	6000 m ²

Líneas de investigación:

- Síntesis y caracterización de nanopartículas para transporte de fármacos, proteínas y material genético.
- Síntesis y caracterización de emulsiones alimentarias.
- Estudio de suspensiones magnetorreológicas.
- Estudio de nanogeles.
- Estudios teóricos y de simulación: teoría del Gradiente, ecuaciones integro-diferenciales, dinámica Browniana, técnicas Montecarlo, dinámica rotacional estocástica.
- Físico-Química de superficies e interfases. Propiedades interfaciales de monocapas.
- Estabilidad coloidal de fluidos complejos. Cinética de agregación de coloides poliméricos modelo.
- Superficies anti-adherentes superhidrófobas.

UNIVERSIDAD
DE GRANADA

Técnicas:

Infraestructura e instrumentación comercial y diseñada ad hoc:

Rheology

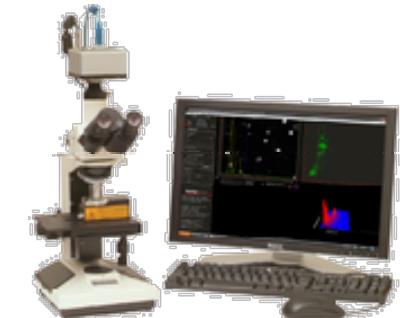

Hydrodynamic diameter
Electrophoretic mobility

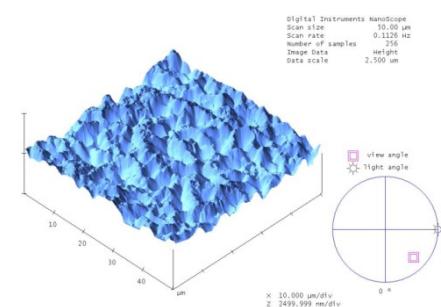

Colloidal stability vs.
salinity

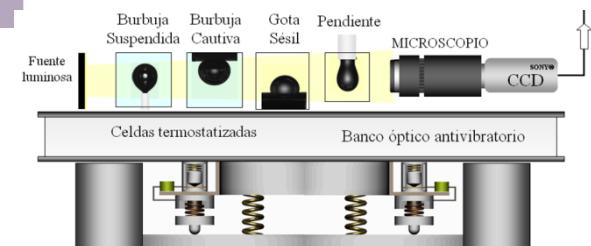

Hydrodynamic diameter
(NTA)

AFM

Surface tension
Interfacial rheology

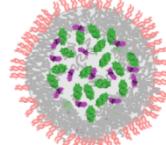

Wettability

Sistemas coloidales con aplicación en Nanotecnología y Nanomedicina. Proyecto MAT2013-43922-R

Nanopartículas de PLGA

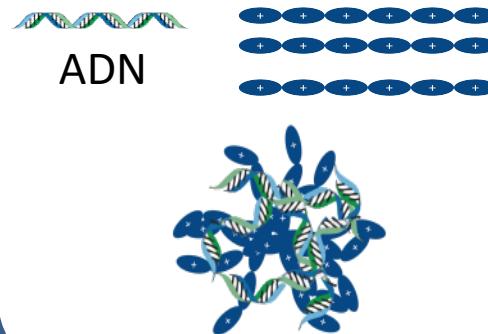

Encapsulación biomoléculas hidrofílicas con propiedades terapéuticas

Poliplejos

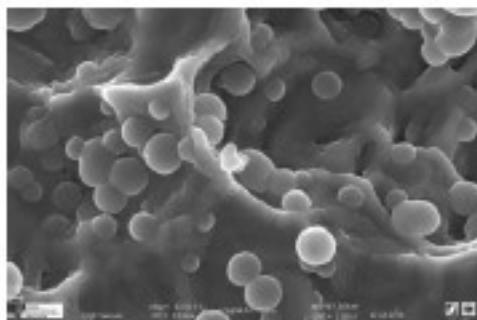

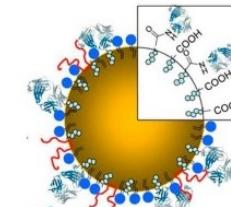

Compactación de

ADN

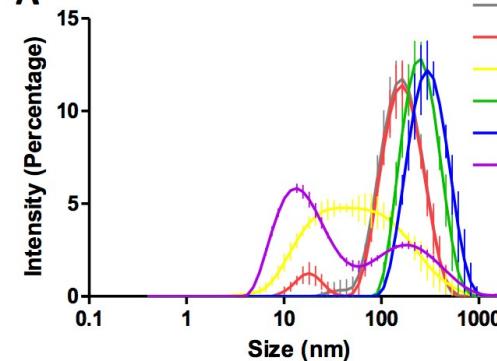

Nanoemulsiones

de aceite de oliva para transporte de fármaco hidrofóbico anticancerígeno

A

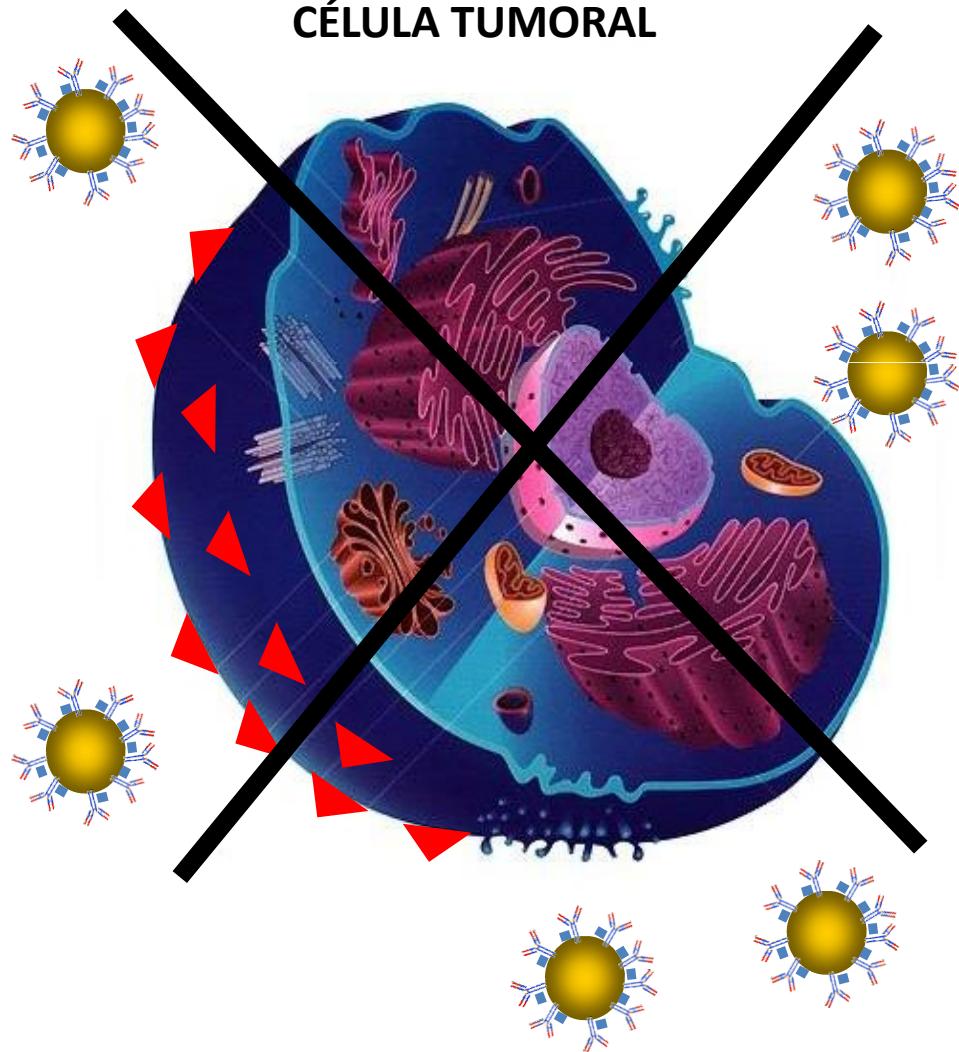

$$g^1(\tau) = \int_0^\infty G(\Gamma) \exp(-\Gamma\tau) d\Gamma$$

NANOCÁPSULAS “INTELIGENTES”

SMART OLIVE-OIL NANOCAPSULES FOR ORAL DELIVERY OF DRUGS AGAINST
PANCREATIC CANCER STEM CELLS (STEMNANOMAT)

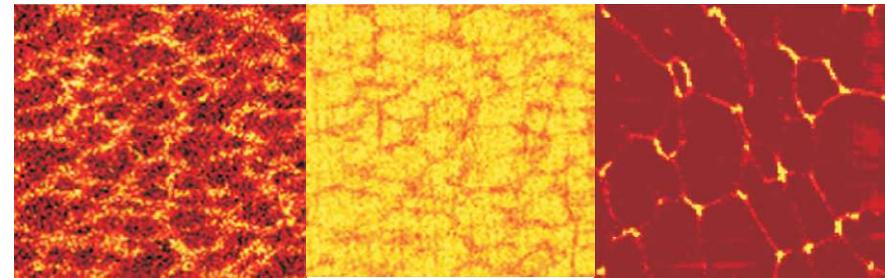

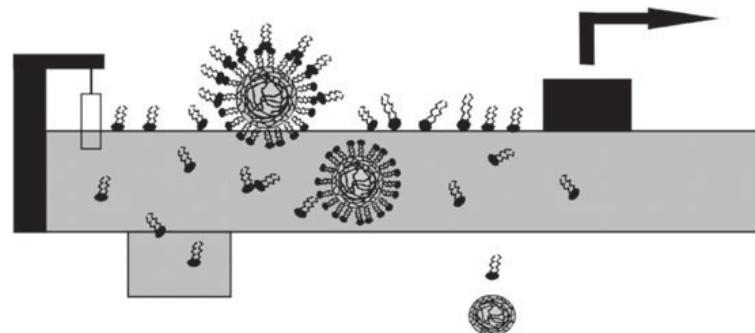

Proyecto MAT2015-63644-C2-1-R

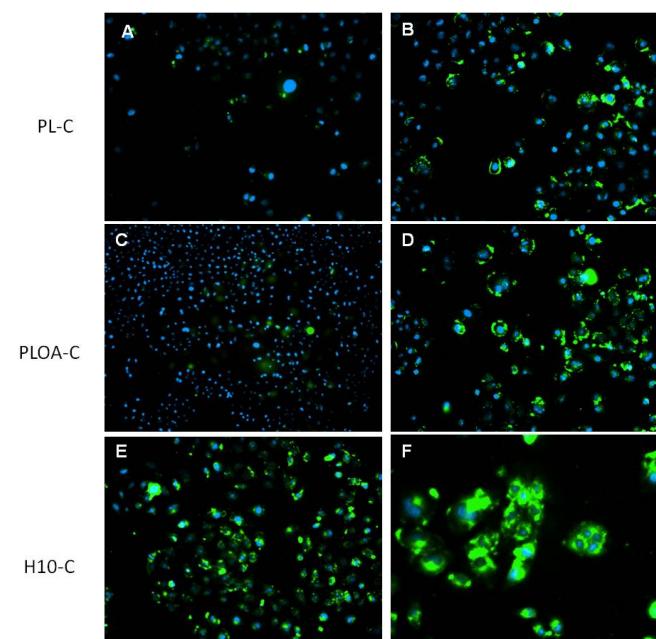

SMART OLIVE-OIL NANOCAPSULES FOR ORAL DELIVERY OF DRUGS AGAINST PANCREATIC CANCER STEM CELLS (STEMNANOMAT)

MAT2015-63644-C2-1-R

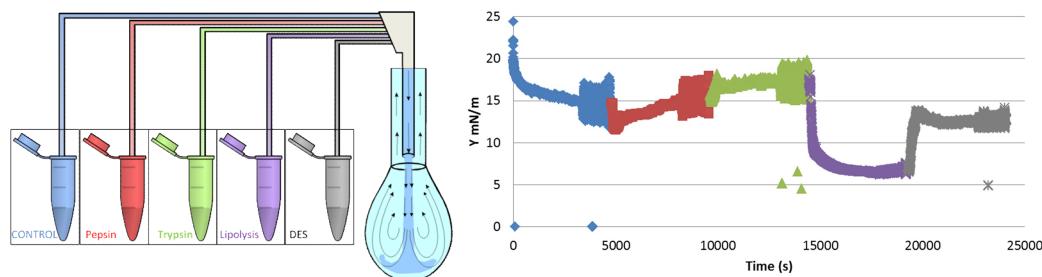

DRUG-MEMBRANE INTERACTIONS

30min 3h

INTERFACIAL BEHAVIOR: DIGESTION PHENOMON

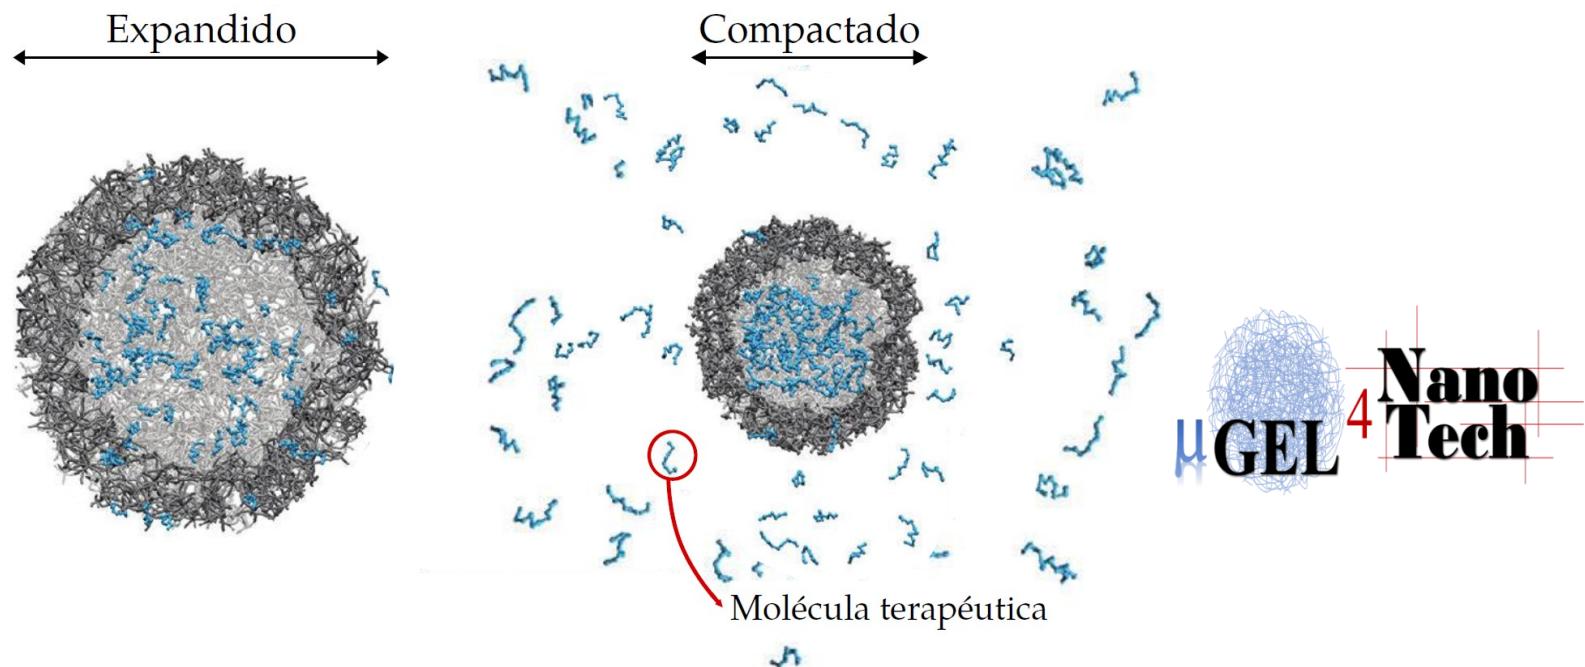

UPTAKE CANCER CELLS

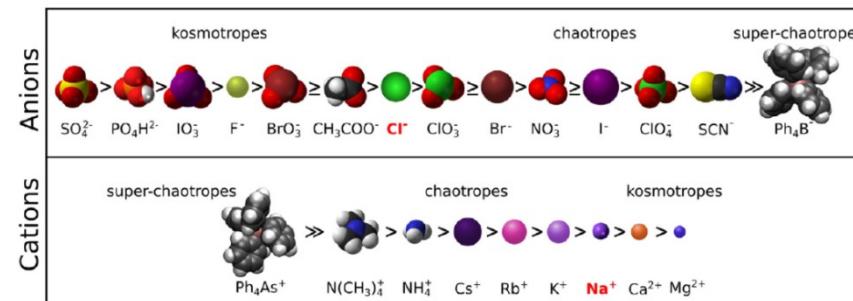

Interacciones y propiedades colectivas de sistemas de materia blanda basados en microgeles de interés en nanotecnología.

Proyecto FIS2016-80086-C2-1-P

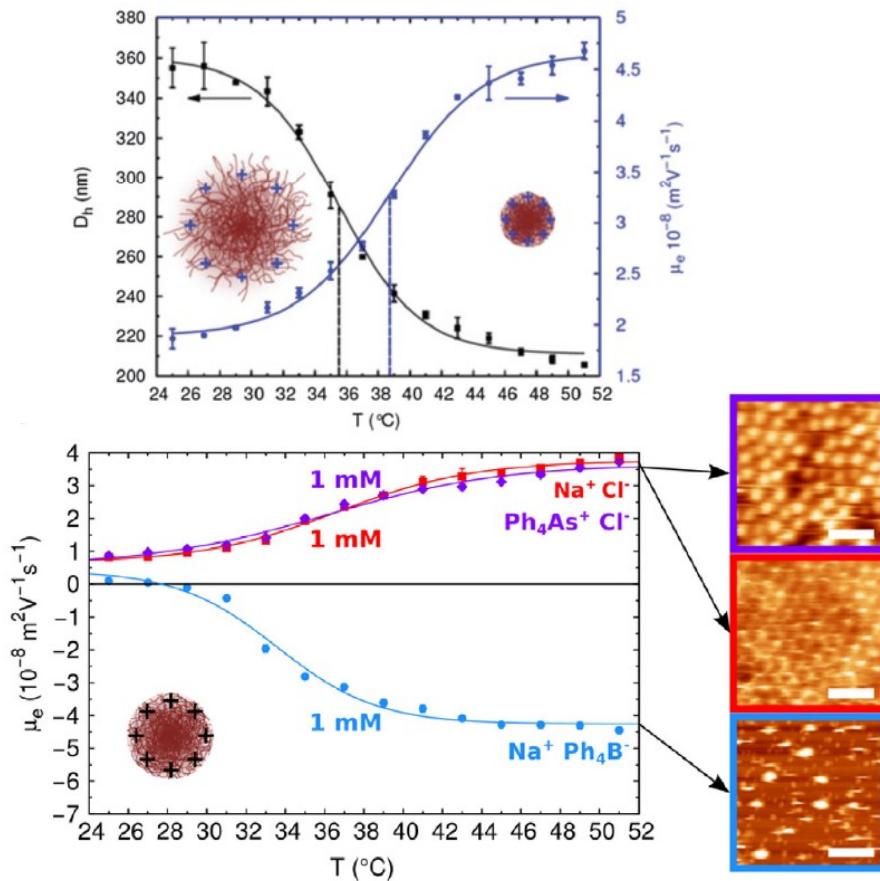

TEORÍA, SIMULACIONES Y EXPERIMENTOS DE SISTEMAS FORMADOS POR MICROGELES CARGADOS SENSIBLES A LA TEMPERATURA (interacciones, propiedades Físico-Estadísticas, estructura microscópica, adsorción de biomoléculas, material genético, estudio de las propiedades físicas y de sus implicaciones en aplicaciones Biomédicas)

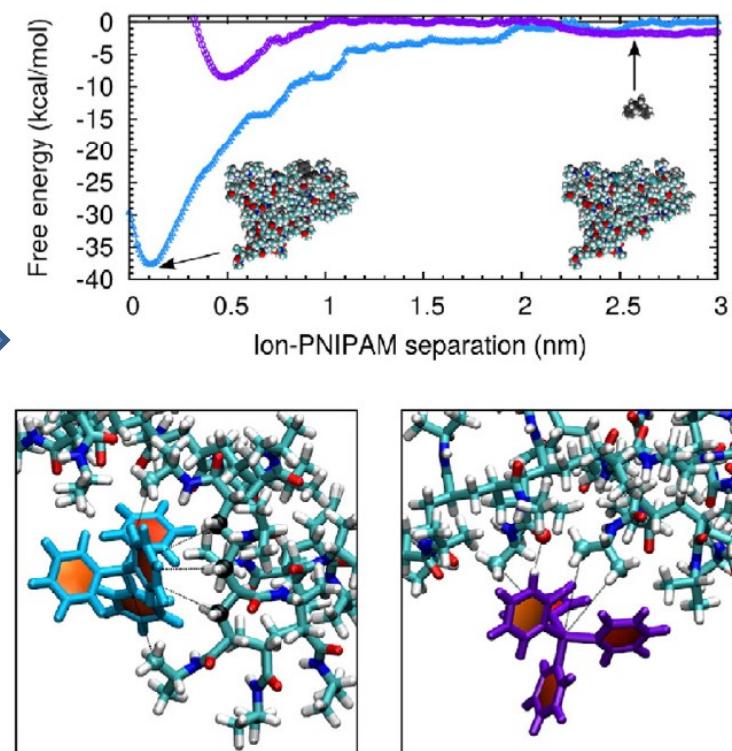

MICROGELES: Ionic specificity or Hofmeister Effects

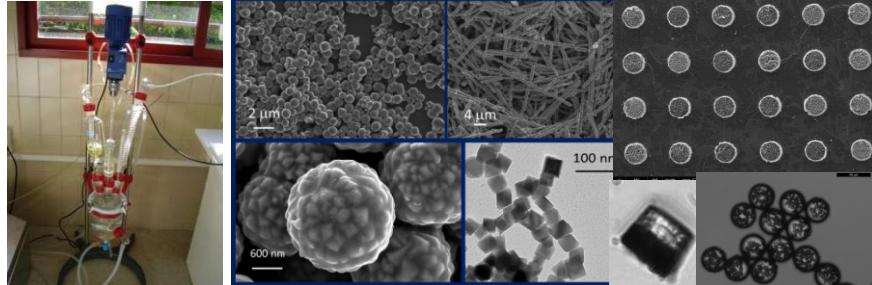

Experimental Results

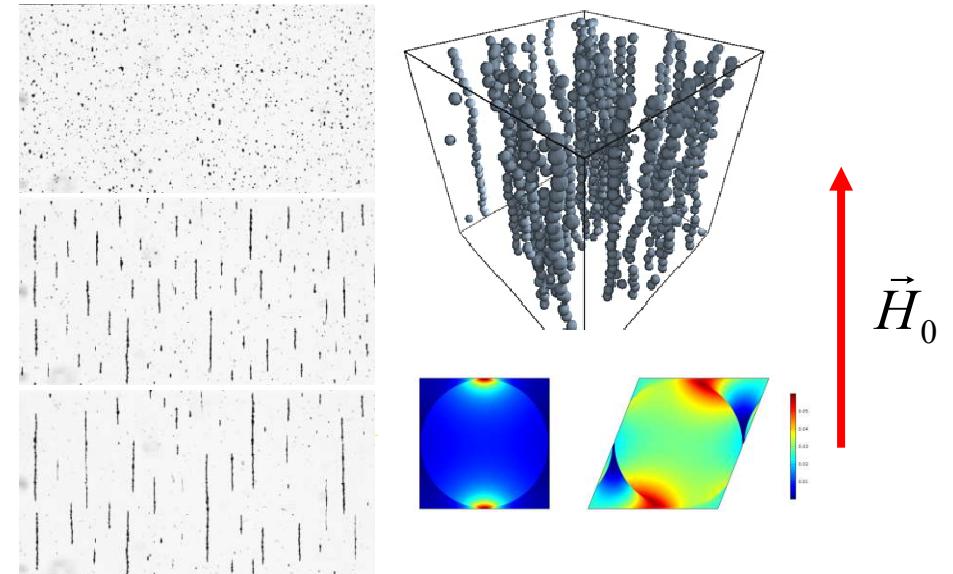

Molecular Dynamic Simulations Results

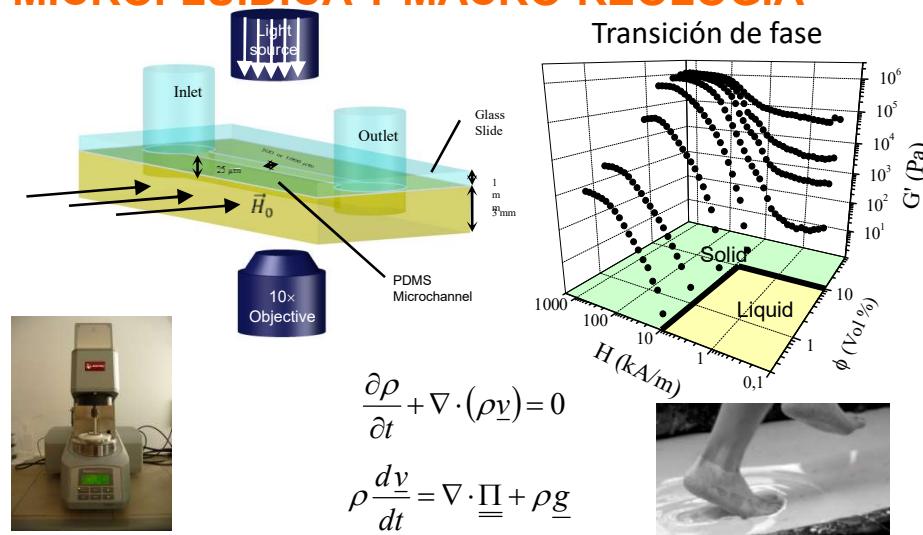

FABRICACIÓN DE NANOPARTÍCULAS

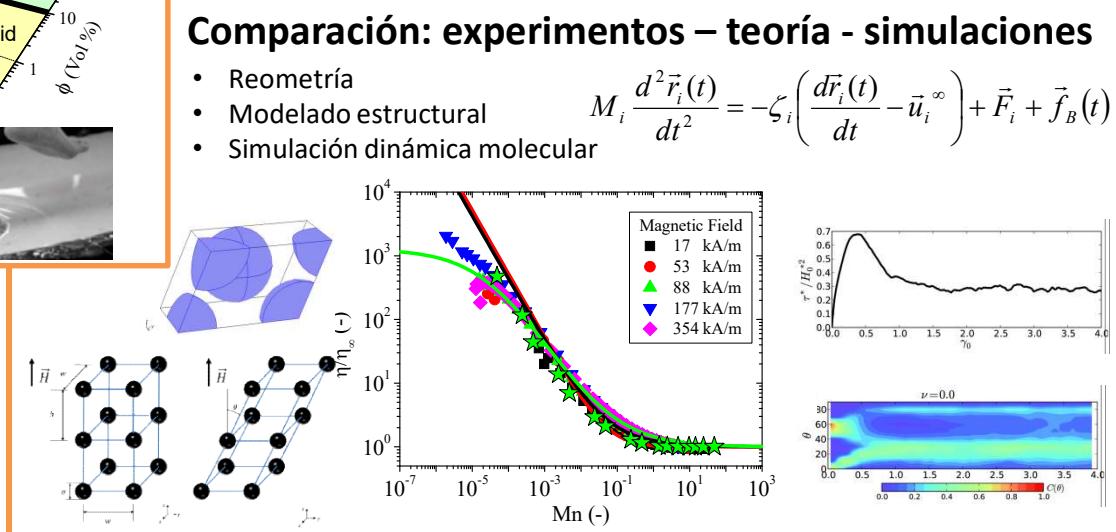

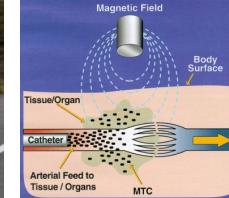

SIMULACIONES Y TEORÍA

MICROFLUIDICA Y MACRO-REOLOGÍA

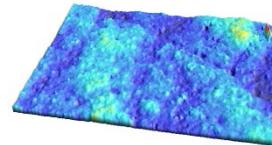

APLICACIONES...

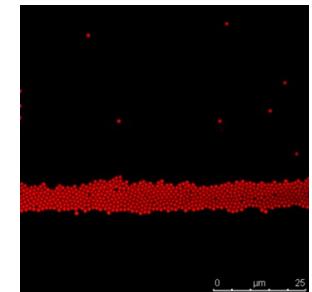

Surface Physics

Nonsticky coatings, anti-icing surfaces,
biomimetic bone-like coatings, colloidal assembly

Topography

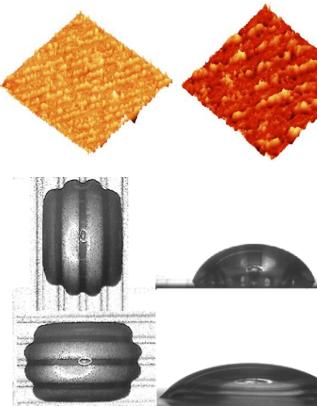

Atomic Force Microscope
White Light Confocal Microscope

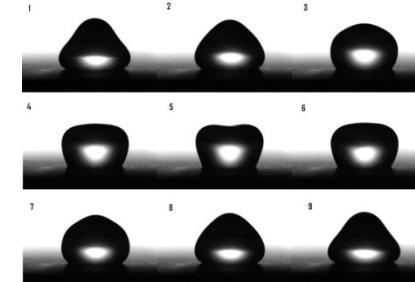

Surface tailoring

RF Plasma Discharge Device
Direct Laser Patterning
Chemical functionalization
UV/Ozone

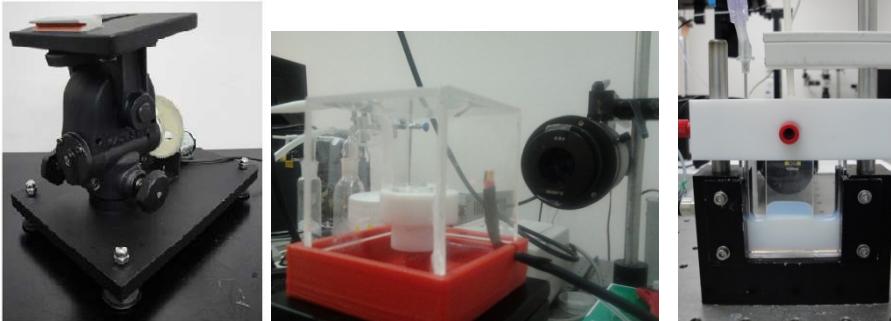

Wettability

Sessile Drop/Captive Bubble
Tilted Drop
Magnetic Drop (high speed camera)
Vibrating Drop (high speed camera)
Bouncing Drop (high speed camera)
Drop image analysis

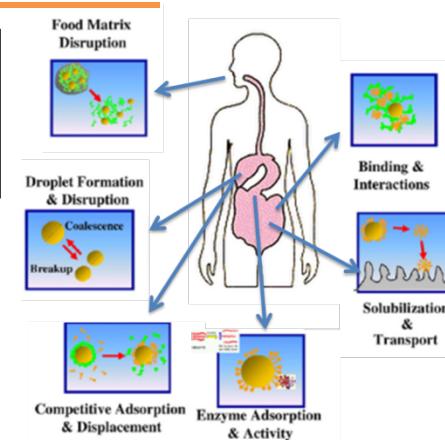

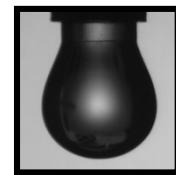

Prototyping

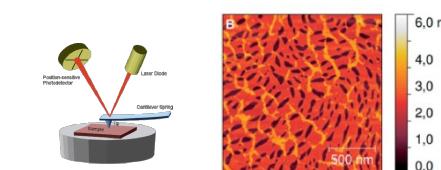

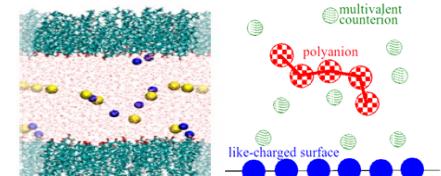

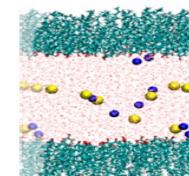

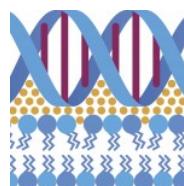

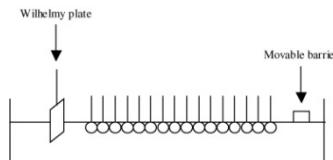

In-vitro digestion studies

- Food allergy
- Lipolysis
- Nanocapsules
- Directed drug delivery

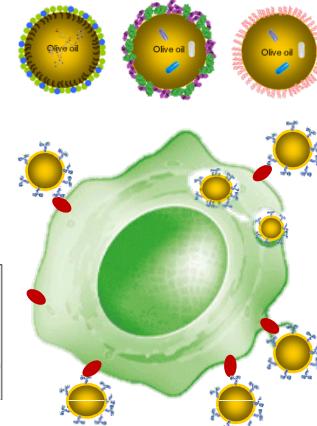

Membranes

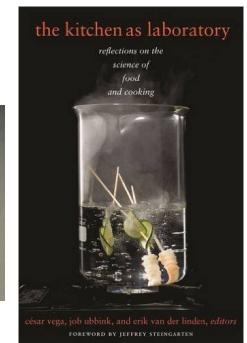

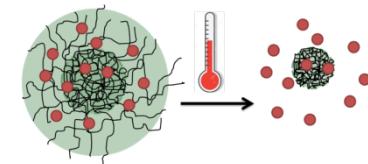

- Lipid monolayers
- Gene therapy
- DNA complexation
- Hydrogels

STEMNANOMAT

μ GEL4NanoTech

Foams and emulsions
