

COURSE GUIDE

**Economic Mathematics 1**

Last updated date: 22/06/2021  
Fecha de aprobación: 30/06/2021

<b>Grado (Bachelor's Degree)</b>	Bachelor's Degree in Economics		<b>Branch</b>	Social and Legal Sciences
<b>Module</b>	Métodos Cuantitativos		<b>Subject</b>	Matemáticas para la Economía I
<b>Year of study</b>	1 <sup>o</sup>	<b>Semester</b>	2 <sup>o</sup>	<b>ECTS Credits</b> 6
			<b>Course type</b>	Compulsory course

**PREREQUISITES AND RECOMMENDATIONS**

Completion of the Mathematics course given in the first semester.

**BRIEF DESCRIPTION OF COURSE CONTENT (According to the programme's verification report)**

- Real quadratic forms.
- Introduction to mathematical programming. The graphical method.
- Differential calculus for functions of several variables. Economic applications.
- Classic optimization without restrictions. Convex optimization.
- Integral calculus of functions of several variables.
- Introduction to differential equations.

**SKILLS**

**GENERAL SKILLS**

- CG02 - Habilidad de comprensión cognitiva
- CG03 - Capacidad de análisis y síntesis
- CG04 - Capacidad de organización y planificación
- CG08 - Capacidad para la resolución de problemas
- CG09 - Capacidad para la toma de decisiones
- CG16 - Capacidad de razonamiento crítico y autocrítico
- CG17 - Capacidad de aprendizaje y trabajo autónomo

**SUBJECT-SPECIFIC SKILLS**

- CE21 - Utilizar herramientas básicas de naturaleza cuantitativa para el diagnóstico y análisis económico
- CE22 - Aportar racionalidad al análisis y a la descripción de cualquier aspecto de la realidad económica

- CE23 - Evaluar consecuencias de distintas alternativas de acción y seleccionar las mejores dados los objetivos
- CE32 - Comunicarse con fluidez en un entorno y trabajar en equipo
- CE37 - Optimización matemática
- CE50 - Adquirir destreza en la resolución de problemas de optimización en el campo económico
- CE51 - Conocer las técnicas de cálculo diferencial e integral en varias variables y su aplicación al análisis económico
- CE52 - Conocer, comprender y aplicar los distintos métodos de Optimización Matemática y algunos de los principales modelos dinámicos en Economía
- CE53 - Aprender a clasificar formas cuadráticas así como a utilizar las técnicas gráficas para resolver programas matemáticos y su aplicación en Economía
- CE54 - Conocer los métodos de resolución de ecuaciones diferenciales de primer orden así como las técnicas de cálculo diferencial e integral en varias variables y su aplicación al análisis económico

### TRANSFERABLE SKILLS

- CT01 - A través del conocimiento y aplicación de los conceptos aprendidos en el grado, ser capaz de identificar y anticipar problemas económicos relevantes en relación con la asignación de recursos en general, tanto en el ámbito privado como en el público

### LEARNING OUTCOMES

- Understand the concepts of partial derivatives, gradient vector and Hessian matrix of real functions of several variables.
- Learn the use of Taylor's theorem for approximating functions.
- Calculate the partial derivatives of a function implicitly defined.
- Understand the importance of the homogeneity of a function for economic applications.
- Calculate the local extreme of real functions of several variables.
- Mathematically formulate economic optimization problems.
- Graphically solve math programs in two variables.
- Study the convexity of a program and apply it to the calculation of global extremes.
- Calculate double integrals on simple regions.
- Calculate solutions of simple differential equations by the method of separation of variables.

### PLANNED LEARNING ACTIVITIES

#### THEORY SYLLABUS

##### Topic 1. BASIC NOTIONS ON FUNCTIONS OF SEVERAL VARIABLES.

- Notation for subsets of  $\mathbb{R}^n$ . Graphic representation of subsets of  $\mathbb{R}^2$ . Euclidean distance. Basic topology in  $\mathbb{R}^n$ : balls, relative position between points and sets (interior, exterior and boundary points), bounded, open, closed and compact sets. Basic notions on functions of several variables: domain, maximal domain and range. Operations with functions. Types of functions: separate variables, polynomial and rational functions. Quadratic forms: definition and classification. Level and sub-level sets. Some functions

of several variables outstanding in economics: utility function, cost quadratic function, production function.

### Topic 2. DIFFERENTIAL CALCULUS FOR FUNCTIONS OF SEVERAL VARIABLES.

- First order partial derivatives. Gradient vector. Chain rule. Implicit derivation. Second order partial derivatives. Schwartz property. Hessian matrix. Taylor formula: lineal and quadratic approximation of functions.

### Topic 3. OPTIMIZATION WITHOUT RESTRICTIONS.

- Definition of local and global extrema. Critical points. Necessary and sufficient condition for local extrema. Saddle points. Convex and concave functions: properties. Coercive and anti-coercive functions. Sufficient conditions for existence of global extrema. Applications to maximization of benefit functions and minimization of cost functions.

### Topic 4. OPTIMIZATION WITH INEQUALITY RESTRICTIONS: THE GRAPHICAL METHOD.

- The Weierstrass Theorem. Optimization with inequality restrictions: the graphical method in two variables. Problems of linear programming in two variables applied to the economic field.

### Topic 4. INTEGRAL CALCULUS FOR FUNCTIONS OF SEVERAL VARIABLES.

- Different types of definite integrals. Double integrals over rectangular regions. The Fubini's Theorem.

### Topic 5. ORDINARY DIFFERENTIAL EQUATIONS.

- Basic methods for resolution of first order differential equations. Separation of variables method. Economics models: classic models, investment and public spending models.

## PRACTICAL SYLLABUS

### Seminars/Workshops

- Workshop for contents reinforcement.

### Laboratory work

- Session 1. Functions of several variables: definition and graphical representation.
- Session 2. Differential calculus for functions of several variables. Optimization without restrictions.
- Session 3. Resolution of double integrals over rectangular regions. Introduction to Ordinary Differential Equations.

## RECOMMENDED READING

### ESSENTIAL READING

### RECOMMENDED LEARNING RESOURCES/TOOLS

- Teaching platform PRADO: <http://www.ugr.es/estudiantes/prado>
- Web site of the Department of Applied Mathematics: <https://mateapli.ugr.es/>
- Web site for computer practice: <http://www.wolframalpha.com>

### TEACHING METHODS

- MD01 Docencia presencial en el aula
- MD02 Estudio individualizado del alumno, búsqueda, consulta y tratamiento de información, resolución de problemas y casos prácticos, y realización de trabajos y exposiciones.
- MD03 Tutorías individuales y/o colectivas y evaluación

### ASSESSMENT METHODS (Instruments, criteria and percentages)

## ORDINARY EXAMINATION DIET

According to the Rules for Assessment and grading of the students of the University of the assessment of students' academic performance will reflect public, objective and impartial criteria, and will preferably be continuous. Nevertheless, the students may apply for a **single final assessment** (article 8 of the current Rules for Assessment, which provides for the taking of a single final assessment). On one hand, lack of application for single final assessment option will be understood as a waiver of the right of such assessment. On the other hand, those students who are granted with single final assessment are not eligible for continuous assessment.

In the **continuous assessment option**, the total score will be the sum of all scores corresponding to assessment activities. These are the following:

- Diverse activities: computer based activities, online tests, face-to-face problem solving, or any other activity proposed by the professor. The total of these activities will represent 10% of the final grade.
- Two mid-term exams: two eliminatory mid-term exams will be held. The first one in the middle of the semester and the second one at the end. Each of them will represent 45% of the final grade.

Students who wish to obtain a higher grade in any of the two mid-term exams, or in both of them, may perform a final exam. Previously, they must waive in writing the grade obtained in the corresponding mid-term exam(s).

## EXTRAORDINARY EXAMINATION DIET

It will consist of a single written exam which will be graded on a 0-10 scale (scoring a maximum of 10 points). In order to pass the course under this option, a final mark equal or bigger than 5 is required. Otherwise, the course is considered to be failed. Date and place for the final written exam will be made public by the Faculty of Economic and Business Sciences.

Students with no attendance to such final written exam (that scores a maximum of 10 points) will have the final mark "Not Having Been Submitted" ("No Presentado").

## SINGLE FINAL ASSESSMENT (evaluación única final)

Following the regulations, a final evaluation is established for those students who have completed the required requirements and have applied for the single final assessment (<https://sede.ugr.es/sede/catalogo-de-procedimientos/solicitud-evaluacion-unica-final.html>).

It will consist of a single written exam which will be graded on a 0-10 scale (scoring a maximum of 10 points). In order to pass the course under this option, a final mark equal or bigger than 5 is required. Otherwise, the course is considered to be failed. Date and place for the final written exam will be made public by the Faculty of Economic and Business Sciences.

Students with no attendance to such final written exam (that scores a maximum of 10 points) will have the final mark "Not Having Been Submitted" ("No Presentado").

Students may apply for single final assessment option, either within the first two weeks of teaching of the subject or within two weeks following change of matriculation. Application is to be made through the electronic system (<https://sede.ugr.es/sede/catalogo-deprocedimientos/solicitud-evaluacion-unica-final.html>), citing and accrediting the reasons for

not being able to undergo the system of continuous assessment (reasons of employment, health, disability or any other correctly justified cause).
